

EL30000 Series

Bench DC electronic loads

Measure, Capture, and Display

The EL30000 Series bench DC electronic loads provide superior performance in a compact bench form factor. A single and dual-channel model is available with up to 600W – ideal for design verification of consumer power supplies, batteries, battery modules, solar panels, LED drivers, and power converters. You can easily characterize wide-bandgap semiconductor components such as MOSFET and IGBT.

- Keysight EL33133A single-input DC electronic load: 150V, 40A, 250W
- Keysight EL34143A single-input DC electronic load: 150V, 60A, 350W
- Keysight EL34243A dual-input DC electronic load: 150V, 60A, 300W; total 600W

The EL30000 Series bench DC electronic loads are fully SCPI programmable with built-in USB, LAN, and optional GPIB interfaces. Advanced features include scope view, data logging, sequencing, battery test, and more, enabling you to measure, capture, and quickly display your results.

Measure voltage and current accurately

Each EL30000 Series bench DC electronic load has a fully integrated voltmeter and ammeter to simultaneously measure the voltage and current for the device under test (DUT). Eliminating external shunt resistors and cables gives you accurate voltage, current, and energy measurements.

To further reduce cabling error, the EL30000 Series bench DC electronic loads have remote sense technology to eliminate voltage drops caused by cables connecting to the DUT. All settings and measurements appear on a large 4.3-inch color display.

Capture measurements over time with the built-in data logger

The EL30000 Series bench DC electronic loads can continuously log voltage, current, and energy to a data file. The sample rate is adjustable from 20 microseconds to 60 seconds. Store the data file on the internal non-volatile RAM or save it externally on a USB memory device as a .CSV file.

Create, capture, and display fast transients

Test the transient response of your power source with a dynamic load profile. The built-in scope feature digitizes the voltage and current and displays the results – just like an oscilloscope. The built-in scope function eliminates the need for external current shunts or current probes. This feature dramatically reduces measurement setup complexity and provides accurate and fully specified measurements.

Optimize battery testing with precise voltage and capacity control

The Battery Test feature for the EL30000 Series bench DC electronic loads offers users a streamlined and efficient solution for a wide range of battery testing applications. It seamlessly integrates with existing instrument modes and settings, simplifying the testing process while ensuring precision and safety. With customizable cut-off conditions based on voltage, capacity, or timer, users can tailor tests to their specific needs, preventing over-discharge and battery damage. The real-time meter view provides instant access to vital measurements, enhancing efficiency and monitoring capabilities.

Features

Table 1. Choose a single or dual-input model

	EL33133A	EL34143A	EL34243A	
Channel	1	1	1	2
Input power	250 W	350 W	300 W	300 W
DC input voltage	150 V	150 V	150 V	150 V
DC input current	40 A	60 A	60 A	60 A
DC input current (parallel)	-	-	120 A	

Measures accurately

- integrated voltmeter and ammeter
- precise programming/readback accuracy
- built-in 2-wire and 4-wire remote sense technology

Captures, stores, and transfers dynamic waveforms

- data logger that is configurable
- log voltage, current, and energy
- internal or external memory storage
- export to .CSV for post-analysis

Displays like an oscilloscope for precise analysis

- performs precise transient analysis with a scope function
- digitizes voltage and current
- displays results on a 4.3-inch color LCD screen

Advanced characterization

- use operating modes: constant current (CC), constant voltage (CV), constant resistance (CR), constant power (CP)
- Battery Test mode: Optimize battery testing with precise voltage and capacity control
- improve measurements with a low current range
- dynamic load profiles with List² (continuous, pulse, or toggle)
- adjust transient steps with a programmable slew rate
- modern connectivity:
 - LAN (LXI-core)¹
 - USB
 - GPIB (optional)

1. LAN (LXI-core) only available for EL34143A and EL34243A
 2. List only available for EL34143A and EL34243A

	Medium	0.08% + 150 mW	0.06% + 260 mW		
	High	0.08% + 1.2 W	0.06% + 1.5 W		

¹ Do not connect the dual inputs on EL34243A in series, parallel mode is only allowed for CC, CR and CP.

² Current ranges:

EL33133A – Low = 4 A; High = 40 A

EL34143A/EL34243A – Low = 0.6 A; Medium = 6 A; High = 60 A

³ Does not apply to current setting <0.05% of full scale current, minimum voltage = 0.5V.

Low range – full scale current = 40 A / 60 A, maximum voltage = 15 V, maximum power = maximum input power;

EL33133A = 0.08 Ω to 30 Ω; EL34143A and EL34243A = 0.05 Ω to 30 Ω

Medium range – full scale current = 40 A / 60 A, maximum voltage = 150 V, maximum power = maximum input power

High range – full scale current = 4 A / 6 A, maximum voltage = 150 V, maximum power = maximum input power

Ultra-high range – full scale current = 0.6 A, maximum voltage = 150 V, maximum power = 10% of maximum input power

⁴ Power ranges:

EL33133A – Low = 0.02 W – 5 W; Medium = 0.15 W – 25 W; High = 1.5 W – 250 W

EL34143A – Low = 0.02 W – 8 W; Medium = 0.3 W – 35 W; High = 2 W – 350 W

EL34243A – Low = 0.02 W – 7 W; Medium = 0.3 W – 30 W; High = 2 W – 300 W

Typical characteristics

EL33133A		EL34143A	EL34243A
Environmental conditions			
Operating environment	Indoor use, installation category II (for AC input), pollution degree 2		
Operating temperature range	0 °C to 40 °C		
Storage temperature	–40 to 70 °C		
Relative humidity	Up to 85% RH at temperatures up to 40 °C (non-condensing)		
Altitude	Up to 2000 meters		
Electromagnetic compatibility	Compliant with EMC Directive (2014/30/EU)		
	IEC 61326-1:2012/EN 61326-1:2013 Group 1 Class A		
	Canada: ICES-001:2004		
	Australia/New Zealand: AS/NZS		
Safety	South Korea KC mark		
	UL 61010-1 3rd edition, CAN/CSA-C22.2 No. 61010-1-12, IEC 61010-1:2010 3rd edition		
Acoustic noise declaration	Sound pressure Lp <65 dB(A) at operator position, Lp <70 dB(A) at bystander position		
AC input	Sound power, Lw <70 dB(A)		
AC input	100 VAC to 240 VAC (±10%), 50/60Hz		
Interface capabilities			
GPIO (Optional)	SCPI-1999, IEEE 488.2 compliant interface		
USB 2.0	Requires Keysight IO Library version 17.2.208 and up		
10/100 LAN	N/A	Requires Keysight IO Library version 17.2.208 and up	
LXI compliance	N/A	Class C	
Digital control characteristics			
Maximum voltage ratings	+16.5 VDC/ -5 VDC between pins (pin 4 internally connected to chassis ground)		
Pins 1 and 2 as fault output	Maximum low-level output voltage = 0.5 V @ 4 mA		
	Maximum low-level sink current = 4 mA		
	Typical high-level leakage current = 1 mA @ 16.5 VDC		
Pins 1 - 3 as digital/trigger outputs (pin 4 = common)	Maximum low-level sink current = 100 mA		
	Typical high-level leakage current = 0.8 mA @ 16.5 VDC		
Pins 1 - 3 as digital/trigger inputs and pin 3 as inhibit input (pin 4 = common)	Maximum low-level input voltage = 0.8 V		
	Maximum high-level input voltage = 2 V		
	Typical low-level leakage current = 2 mA @ 0 V (internal 2.2k pull-up)		
Typical high-level leakage current = 0.12 mA @ 16.5 VDC			
Remote sense capabilities			
Inputs can maintain specifications with up to a 5-volt drop per load lead.			
The load lead drop reduces the maximum available voltage at the load.			
Weight and dimensions			
Weight, kg	6.50	6.50	8.42
Overall dimension, mm (H x W x D)	144.85 x 215.90 x 457.60	144.85 x 215.90 x 476.01	
Net dimension (without feet, strap handle, and GPIO module), mm (H x W x D)	132.51 x 212.80 x 457.60	132.51 x 212.80 x 458.48
